Ferns Are Profit Providers For Enterprising Florists!

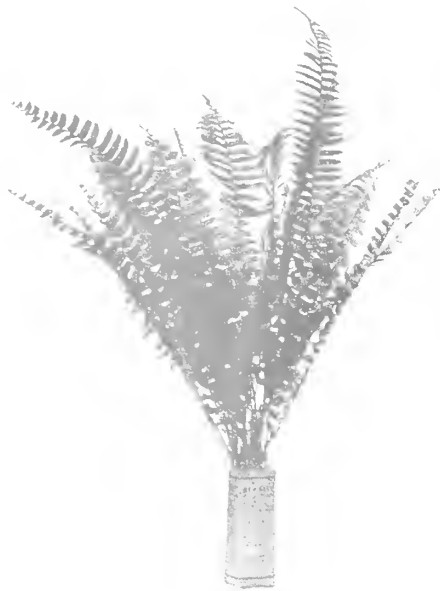

United States Dept. of Agriculture,
Bureau of Plant Industry,
Washington, D. C.

Every Plant A PROVEN Sales Hit!

ASPARAGUS PLUMOSUS

BOSTON

ASPARAGUS SPRENGERII

Our growers have 32 acres planted in ferns. We honestly believe that this represents the greatest number of varieties and is the largest single unit of ferns in America. Note the new paraffined containers we ship in. It makes the ferns stand up better in transit.

SANSEVIERIA

AGAVE

PANDANUS

RUBBER PLANT

ASPIDISTRA

HOW THEY COME

We have perfected a wrap in which the plant is protected by Spagnum moss surrounded with durable wax paper or fern carton. For years we have been shipping to such distant points as Canada and the Pacific Coast and only a small fraction of 1% have failed to reach their destination in excellent condition.

There is no packing charge.

Orange County Fern Growers Association

A Co-Operative Association of Fern Growers

Apopka, Florida

Mr. Florist:

We're not much good at this letter writing business.

However, we do want to tell you of the wonderful plants that we offer.

First, every grower with us is the leader in his line. And we mean that.

Second, all items have been priced to show us a profit. Not so that we'll get rich, you understand, because goodness knows this has certainly been a tough year with us. When customers who have paid promptly for years slow up—well you know how it is.

Anyhow, we've raised good stuff and now propose to sell it at the smallest margin of profit in years—but it will have to be cash or C.O.D.

We know how that makes you feel—but we've just got to do it. Look over the listings—see if you don't agree with us that here are real values.

Then send us a small trial order—we know you'll come back for more.

Cordially yours,

Orange County Fern Growers Association.

H. J. USTLER, President

Orange County Fern Growers' Association, Apopka, Florida
